Armenian-Georgian Joint Colloquia

Armenian-Georgian astronomical colloquia have been organized since 1974 and in total 14 meetings were held, both in Byurakan and in Abastumani observatories. Each year, typically 15 astronomers from one of these countries visit the other one and scientific talks, joint discussions and friendly competitions are being held. Last meeting: 2013, Byurakan.

Armenian-Iranian collaboration

- **Iranian-Armenian astronomers**: Alenush Terian (Mother of Iranian astronomy), Vahe Petrosian
- **Previous relations**: BISS 6 Iranian students (2010, 2012); G.T. Ter-Kazarian, A.G. Nikoghossian, et al.
- Shant Baghramian (Sharif University of Technology, Tehran): Cosmology; Aram Saharian
- **Collaboration subjects**: observations *vs.* theory; BAO 2.6m and other telescopes
- **Forms of collaboration**: ROAD, projects, visits, observations, PhD and MSc students, joint meetings
- **Participating institutes**: BAO, YSU, ICRANet, other?
- Armenian-Iranian workshop 2015
- NAS RA ISEC international PhD students
- Research subjects from BAO (for joint projects and PhD theses)

Armenia and Iran are among the most ancient countries in the world and have lived as neighbours through thousands years of history. Armenian and Iranian culture has many similarities and relations. During the recent years, tight relations are being established in more and more spheres, including politics, economy, tourism, sports, culture and indeed science. This Workshop is to strengthen our scientific relations and establish new collaboration. We plan to organize such workshops on annual basis, succeeding each other one in Armenia and one in Iran.

Aims and scope. We will establish mutual contacts, discuss and conduct joint research projects, give start to Armenian-Iranian astronomical collaboration, which will include several forms of relations:

- organization and participation in regional activities;
- collaborative research grants between Armenian and Iranian scientific groups;
- stays of Armenian scientists at Iranian institutions for joint research work;
- stays of Iranian scientists at Armenian institutions for joint research work;
- stays of young Armenian scientists for training and fulfillment of Ph.D. theses;
- stays of young Iranian scientists for training and fulfillment of Ph.D. theses;
- organization of joint meetings in frame of the collaboration;
- Byurakan International Summer Schools (BISS) with invitation of Iranian students;

South West Asia
Regional Office of Astronomy for Development

The International Astronomical Union's (IAU) Office of Astronomy for Development (OAD) has established new coordinating offices in Armenia, Colombia, Jordan, Nigeria and Portugal. Supporting the use of astronomy as a tool for development in specific regions and languages, the new partnerships form part of the IAU's decadal strategic plan — which aims to realise the societal benefits of astronomy.

The agreements were signed at the Hawai'i Convention Centre in Honolulu, Hawai'i, during the IAU's triennial General Assembly. The final signatures were received during a media event on Thursday 13 August 2015.

The five new offices will perform two important functions. Regional offices will coordinate astronomy for development activities in nearby countries, whilst language expertise centres will deal with language and/or cultural aspects. Each of the offices will be hosted by a local institution or consortium of institutes and supported in their efforts by regional partners.

The new coordinating offices of astronomy for development are as follows:

1. The South West Asian Regional Office, hosted at the Byurakan Astrophysical Observatory (BAO) in Armenia.
2. The Andean Regional Office, hosted at three collaborating institutions: Universidad de Los Andes (Colombia), Parque Explora-Planetario de Medellín (Colombia), and Sociedad Chilena de Astronomía (Chile).
3. The Arab Regional Office and Arabic Language Expertise Centre, hosted by the Arab Union for Astronomy and Space Sciences and located at the United Nations Regional Centre for Space Science and Technology Education in Jordan.
4. The West African Regional Office, hosted at the Centre for Basic Space Science (CBSS), National Space Research and Development Agency (NASRDA) in Nigeria.
5. The Portuguese Language Expertise Centre, hosted at Núcleo Interactivo de Astronomia (NUCLIO), in collaboration with the Institute of Astrophysics and Space Sciences in Portugal.

Together with existing offices around the world — the East Asian Regional Office and Chinese Language Expertise Centre in China; the East African Regional Office in Ethiopia; the

SWA ROAD

ARMENIA as an IAU REGIONAL CENTRE of ASTRONOMY for DEVELOPMENT

The **International Astronomical Union** (IAU, www.iau.org) is the largest body of professional astronomers in the world. In frame of IAU strategic plan, the **Office of Astronomy for Development (OAD)** in partnership with the South African National Research Foundation (NRF) has been set up. The OAD was officially opened on 16 April 2011 at the South African Astronomical Observatory (SAAO) in Cape Town, South Africa. Kevin Govender is the OAD Director. The first major workshop of stakeholders was held on 12-14 December 2011. In addition to OAD, **Regional Offices of Astronomy for Development (ROAD)** will be established for coordination of astronomy development in the whole world, as well as **Language Expertise Centres**. Since the opening of OAD, three ROADs and one Language Expertise Centre have been established, as well as OAD is planning its activities within three **Task Forces**:

- Universities and Research (TF1);
- Children and Schools (TF2);
- Public Outreach (TF3).

Office of Astronomy for Development

In 2012 the first open Call for Proposals was launched for each of the task forces and in 2014, new Calls were announced. Many astronomy centres have benefited from these activities.

Since the beginning of this initiative, Armenia has been rather active in proposing projects and submitting a proposal to host a regional office in **Southwest Asian area**. IAU found Armenia's proposal rather strong and justified, however only recently Armenia has been selected to coordinate IAU Astronomy for Development activities in this region. Armenia and particularly Byurakan Astrophysical Observatory (BAO) is a reliable centre for astronomy development in the Southwest Asia region, involving the South Caucasus countries (Armenia, Georgia and Azerbaijan), Iran, Turkey and Israel, where efforts are being made to develop astronomy (Arabic countries develop their own project for a similar centre). In addition, in frame of the European Eastern Partnership program, Armenia will play a role of the link between Europe and Eastern countries. Central Asian countries (former USSR republics) Kazakhstan, Uzbekistan and Tajikistan may also join.

ASTRONOMY IN IRAN

Archaeoastronor

Astronomy in Iran rou go. When Cyrus the Great, the founder of the Persian Empire, captured Babylon in 539 B.C., magi who migrated there transformed Babyloni cord planetary motion through constellations. In turn magi learned from the Babylonian astronomers as well and translated Babylonian books into a galaxy was first identified by a Persian astronomer Abd al-Rahman al-Sufi calling it a little cloud in his book of fixed stars around 964. In 13th c nique place in the history of medieval astronomy, was established, representing a new wave of scientific activities in the Islamic world. It had a key role in the development of sophisticated pre-Copernican non-Ptolemaic systems for explaining the planetary motions, and it was the model for several observatories that were built in Persia, Transoxiana, and Asia Minor up to the 17th century.

عظمت بازیافته رصدخانه قدیمی مراغه (طرح جدید)

Iranian astronomy today

Research in Astronomy and Astrophysics has been conducted in a number of universities in Iran. There are two dedicated research institutes in Iran, IPM School of Astronomy in Tehran and Research Institute for Astronomy and Astrophysics in Maragheh (RIAAM). Among the most active universities in astronomy one could name IASBS in Zanjan, Ferdowsi University of Mashhad (FUM), University of Tabriz, Shiraz, Birjand, Kerman and Zanjan universities, and Amirkabir University of Technology and Sharif University of Technology, both in Tehran. With nearly 400 members, the Astronomical Society of Iran (ASI) is a non-governmental organization that represents the Iranian community of astronomy internationally and professional and amateur astronomers and organizes training workshops, throughout the year. Iranian astronomers gather twice a year to

PROJECTS

Multilingual Astronomy Portal (MAP)

Multilingual Public Astronomy Portal is a great guide for the public interested in astronomy from all over the world. Through this webpage we draw a link between science and public and by this promoting informal education. Here you can simply navigate in 40 main landing pages and find the core links that you need. This is a unique webpage covering all the information related to all the spheres of public astronomy in 24 languages by this we involve public from all the corners of the world, as well as the webpage serves as a portal to astronomy for the South West Asian regional countries. Our team especially emphasizes the involvement of modern communication methods, such as forums, social networks, blogs, etc. Here the educational pages are also heavily involved. This webpage also supports IAU Division C activities ("Education, Outreach and Heritage"). Webpage menus fit its Commissions and Working Groups subjects and aims.

SWA ROAD EVENTS

IAU OAD / SWA ROAD Workshop
12-13 October 2015, Byurakan, Armenia

A regional astronomical meeting with representatives from Armenia, Georgia, Iran, Israel, Jordan, Russia, and Turkey will take place in Byurakan, Armenia and will be dedicated to the official Inauguration Ceremony of IAU SWA ROAD. This will be the first face to face workshop of SWA ROAD and will aim to set the agenda for its future activities. During the Armenian-Iranian Astronomical Workshop on 14-16 October there will be an opportunity to visit various facilities that will be part of the ROAD and available to the region, as well as various side meetings with the delegates. more...

Astronomical surveys are the main source for discovery of astronomical objects and accumulation of observational data for further analysis, interpretation, and achieving scientific results. In 1940s-1950s Palomar Observatory Sky Survey (POSS, at present digitized as DSS1) gave more data that it was collected during the whole epoch of astronomical observations before. Similarly, Markarian Survey (or the First Byurakan Survey, FBS) was the first large-area spectroscopic survey resulting at low-dispersion spectra of 20,000,000 objects. Later on, many all-sky or large-area surveys appeared (POSS2 (DSS2), SDSS, etc.). Sloan Digital Sky Survey (SDSS) so far has provided the largest database (both photometric and spectroscopic) and SDSS-based virtual sky may be explored for new discoveries. CALIFA gives a new large set of spectra. Gaia and LSST are the next source for vast amount of information. Modern multiwavelength surveys include GOODS, COSMOS, GAMA, and others. The large amount of data requires new approaches to data reduction, management and analysis. We now deal with Big Data. Powerful computer technologies are required, including clusters and grids. Virtual Observatories (VOs) have been created to coordinate astronomers' and computer scientists' actions and help in accomplishment of complex research programs using all the accumulated data. International Virtual Observatory Alliance (IVOA) unifies 20 VO projects for joint efforts toward handling of Big Data and creation of an environment for more efficient research. The International Council of Scientific Unions (ICSU) has recently created World Data System (WDS) to unify data coming from different science fields for further possibility of exchange and new science projects.

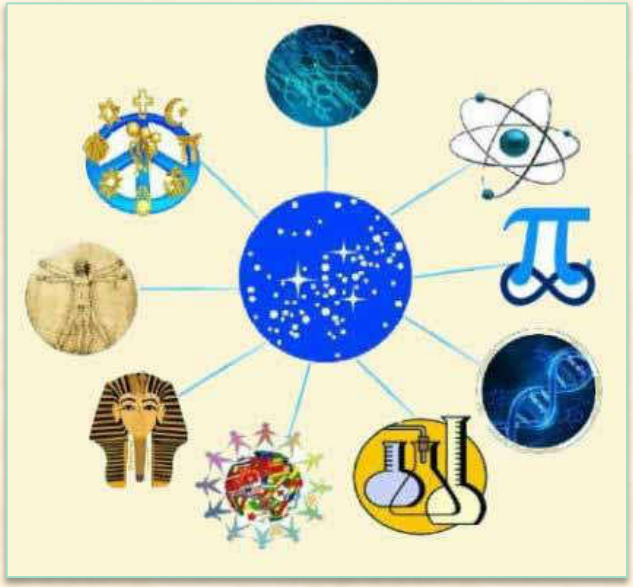

A meeting *"Astronomical Surveys and Big Data"* dedicated to 50th anniversary of Markarian Survey and 10th anniversary of the Armenian Virtual Observatory (ArVO) will be held on Oct 5-8, 2015 in Byurakan, Armenia. We intend to combine astronomers and computer scientists with heavy involvement of astronomical surveys, catalogs, archives, databases and VOs.

Our meeting will contribute to the following:

- Review and discuss large astronomical surveys to summarize observational data obtained in astronomy
- Give tribute to Markarian Survey and other important surveys
- Review and discuss astronomical catalogues, databases and archives
- Learn about major upcoming surveys (including PanSTARRS, Gaia, and LSST)
- Learn and discuss how large observational data sets are changing astronomy
- Introduce tools and techniques for working with large data sets (including access, analysis, and visualization)
- Discuss the future of astronomical research by joint efforts of astronomers and computer scientists

The Symposium is dedicated to Markarian Survey 50th anniversary. Benyamin Markarian (1913-1985) was the first to
